

EmarkList Project

There are two approaches for Emarklist project

Existing Way:

3 Modules:

i-Register as job Seeker:

A person can find his dream job.

ii-Register as Employer:

Company Can Post Jobs and can hire people.

iii-Register as Business Listing:

Company can provide their services.

Another Approach:

2 modules:

i- Register as job Seeker:

A person can find his dream job.

ii-Register as Employer:

Company Can Post Jobs, hire people and can also provide their services.

You don't have to register again for service posting.

Both functionalities (Post job and provide services) will be provided in this module.

My suggestion: I think that second approach is more reliable and more efficient and easy to use for end user.
